### Toolbox Talk: Ice & Snow on the Job Site

#### **Inspect the Work Site Daily**

The winter may bring sudden dangerous weather changes. **It's important for supervisors to inspect the work site before releasing construction workers to start working.**

Any new hazards should be dealt with before work begins.

#### **Remove Ice and Snow before Starting Work**

Construction workers have enough obstacles causing danger at the work site. They don't need to add ice and snow into the mix. Make sure all ice and snow has been removed and salt has been put down on any large patches of ice **before starting work.**

It may seem like a time-consuming task, but it will protect everybody on the job site.

Please be sure to sign your name to the training certification form.
